Nortiqo Upgrade

Know what an upgrade breaks, before it is done.

See which of a customer's customisations the new release breaks, which need a test and which are safe, before anything is upgraded. The Sage partner then works through the findings as the upgrade's task list, and the customer keeps the report.

A folder's readiness. The collector's last run in a folder: its readiness score, and its developments with every dependency to compare with the next release.

In Sage X3 · demo data

The risk of an upgrade is in the customisations

Sage's release notes say what changed in Sage. They cannot say what that breaks in one customer's own code. Nortiqo Upgrade compares every customisation's dependencies with the new release before anything is upgraded, and turns the result into the upgrade's task list.

How it works

01

Collect

In the customer's folder, the collector takes an inventory of the customisations and writes a fingerprint file.

02

Compare

In a reference folder at the new release, the fingerprint is imported and every dependency compared.

03

Work

Each finding is Broken, At risk, Unaffected or Can't compare, and takes a status as the work goes on.

04

Confirm

After the test upgrade, a second run in the same folder confirms the work line by line.

What it does

An inventory of customisations

The folder's customisations, by activity code, and everything each relies on in Sage.

A fingerprint of facts

Facts about the customisations and what they rely on in Sage, taken to a reference folder at the new release.

A readiness score

From 0 to 100 against Sage's update-ready rules, with every point behind it listed.

Every dependency judged

Broken, At risk, Unaffected or Can't compare.

The findings are the task list

A status on every line, with who set it and when, and a report to open in Excel.

Confirmed after the test upgrade

A second run in the same folder confirms the work line by line.

Sage's elements untouched

It reads Sage's elements and never changes them.

Each dependency is judged

- ✓ Broken
- ✓ At risk
- ✓ Unaffected
- ✓ Can't compare

Who it is for

The partner's project lead

The scope of an upgrade from its findings, before the quote: what breaks, what needs a test, what is safe.

Developers

Broken lines first, each with what it relies on, what changed and where to test it.

The customer

A report of what was checked, fixed and confirmed, to keep with the upgrade.

What it needs

- A customer upgrading to the latest Sage X3 V12 release.
- A reference folder at the release the customer moves to, with the same modules, legislations and activity codes as the customer's.
- For the help, browsers that reach nortiqo.com.

How to buy

Licence	**€1,800 per upgrade**	20,000 kr

Prices exclude VAT. A business customer in another EU country pays no Swedish VAT: the reverse charge applies.

- Priced per upgrade: one customer's move to one new release, all its folders included, on the Sage partner's quote.
- One standard X3 patch, installed in the customer's folder and in a reference folder at the new release, with installation and setup help from Nortiqo.
- Help and support in English.

Buy through a partner: Systemstöd Sweden
